Great summary/primer of things to work on. I particularly like #4 & #5 - very well put.

All good stuff and very relevant to racing.

#6 & 7 were my main issues that once fixed yielded much faster lap times. It is fun to drive the car with the tail out but it is slow. I prefer a slight understeer to nuetral position. This is what suits my driving style and provides a better exit speed with lower HP cars IMO.
