

Creative way to reinstall windows for transit?

Posted by Tabbasco - 30 Oct 2012 05:38

Trying not to reinvent the wheel...does anyone have a way to install windows for transit to and from an event.

I removed mine for both weight and safety, as a hit on the door could send glass flying, but need to reinstall for transit...

Was considering an aluminum cradle or possibly drilling thru the glass (if possible) and inserting two or three brackets to hold the window in place...

Suggestions???

Do you have the upper window channel still with gasket in place? If so use the strap method above. It will take your manual assistance to insert into the channel but then the strap will retain it.

I got rid of everything in the door and just use cheap thin plexiglass on the outside. Check it out....

X

Could you take a few more pictures...maybe a little farther away?

I still have the window channels in place and just use big Binder Clips under the glass. (Similar to Ken's bolt but even easier).

Can be seen here:
