

Harness advise

Posted by Gary_44 - 21 Jul 2008 13:35

What type of 5pt harness works for the 944, I don't mean which brand but what length, bolt mount or rollcage mount?

thanks.

I duplicated on the NASA forum, so no need to answer both.

Do I read that right? An SFI 16.1 can be used with any head restraint, SFI 16.5 I'm limited to only HANS?

Yep,

16.1 is the standard 3" belt. 16.5" are "Hans specific" and have 2" wide section where the ride over the HANS. Those belts are only allowed if a HANS is used. The 3" can be used with either HANS or not. I use 3" belt. I also got ones with FIA approval. The reason is that SFI belts are good for only 2 years before the "expire";. If they are also FIA rated then you get to use them for 5 years. Most belts are good for 5-10 years if you treat them right so getting an FIA tag gets you a lot more useful life from them. I spent \$300 on a set of Schroth FIA belts a few years ago. Expensive belts, but very very nice. When these expire at the end of next year I will probably get another set of these belts.
