

944 Spec Alignment

Posted by porscheotto - 17 Mar 2010 07:28

Can someone tell me what the recommended 944 Spec alignment should be while using RA1s?

Thanks in advance,

Otto

Take a look in the "Koni replacement thread" in the general area.

After a couple pages we talk about alignment settings.

In general I run about -3.5 deg front and -2 deg rear camber and zero front and 1/8 toe in for the rear.

The difference between R888 and RA-1 was only that RA-1 worked better with more camber. 1/2 to 3/4 degree, but now you are getting into the fine tuning effect.
