

Fuel System Rules changes (15-16)

Posted by joepaluch - 07 Nov 2009 22:53

These are PROPOSED changes gather from the various discussions. Use this area to further discuss these. Based on the feedback we get the rules will be changed (or not) to reflect these updates. It is anticipated that some rules changes will NOT be accepted, but all are up for debate.

15 Fuel Filler neck Restrictor

Fuel filler neck may be modified to remove the diameter restrictor.

16 Fuel Lines Aftermarket & Coverings

Rubber fuel lines from the chassis to the fuel rail may be replaced or modified. Any covering or heat shielding allowed on these lines in the interest of fire prevention.

Eric,

Post a picture?

Billy. I don't have a pic handy, but just took a hole saw to the restrictor. Make sure you do this with everything secured, on a drill press if possible. I let a mm or two around the edges, so as to not get into

the wall of the filler neck.

Do you still need an early offset wheel?

My Take

15) I would rather see us stay stock, but I have no major issues with this. One issue is that it will become a "must do" for any car running an enduro.

16) I support as and "performance" impact from insulating fuel line is counter by the improves safety given where these lines run.
